PROFESSIONAL SUMMARY

Software Engineer and Full-Stack Developer (B.Sc. in CSE, Independent University, Bangladesh, 2026) who designs, tests and deploys end-to-end web applications with React, Next.js, TypeScript, Node.js, Django and PostgreSQL. Built **10+** full-stack projects, six deployed live, including a concurrency-safe ride-pooling platform, an AI career platform with 990+ automated tests, and a three-role services marketplace with bKash and Nagad payments. Strong in REST API design, authentication, transactional database design and LLM API integration.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, PHP, C, HTML5, CSS3
Frontend: React.js, Next.js, Vite, Tailwind CSS, Bootstrap, Responsive Design, Chrome Extensions (MV3)
Backend & APIs: Node.js, Express.js, Django, Django REST Framework, FastAPI, Fastify, WebSocket
Databases: PostgreSQL, MySQL, MongoDB, Prisma, Drizzle ORM, Supabase, Neon
Testing & DevOps: Jest, Supertest, Docker, Docker Compose, GitHub Actions, Git/GitHub, Render, Vercel, Netlify
Concepts: REST API Design, Authentication & Authorization (JWT, OAuth 2.0, RBAC), Database Design & Migrations, Concurrency Control, Backend-for-Frontend (BFF)
AI / ML: LLM API Integration (Claude, Gemini, OpenAI, Groq), Structured Output Validation (Zod), CNN, Regression
Soft Skills: Problem Solving, Critical Thinking, Teamwork, Effective Communication, AI-Assisted Development
Languages Spoken: English (Fluent), Bengali (Native)

WORK EXPERIENCE

Web Developer (Project-Based Internship), FNF Planet — Jan 2026 – Apr 2026
Servico, Service Booking System | React, Vite, Tailwind CSS, Django REST Framework, PostgreSQL, JWT
Live: servico-frontend-0fl0.onrender.com | **Code:** github.com/HafijurRahmanBhuiyan/servico

- Built a home-services marketplace inspired by Sheba.xyz with React and Django REST Framework, delivering three role-based portals (customer, provider, admin) in a cross-functional team.
- Developed REST APIs across 10 Django apps (bookings, payments, providers, reviews, chat, promos, support, admin analytics) with JWT access/refresh tokens and automatic client-side token refresh.
- Integrated bKash Tokenized Checkout and Nagad payment gateway clients alongside bank-transfer and cash flows; added promo codes, moderated reviews, booking-level customer-provider chat, and provider onboarding with NID upload and admin approval.
- Designed the PostgreSQL models for users, services, bookings and payments; took part in code implementation, testing and deployment, with the frontend and API deployed as separate Render services.

PROJECTS

Dhaka Tesla Pool: Concurrency-Safe Ride-Pooling Platform
Next.js (App Router), React 19, TypeScript, Express.js, Prisma, PostgreSQL (Neon), JWT, Docker, Jest
Live: dhaka-tesla-pool-eight.vercel.app | **Code:** github.com/HafijurRahmanBhuiyan/dhaka-tesla-pool | **Demo:** Loom video

- Built a full-stack ride-pooling platform for Dhaka that seats passengers with the same pickup and compatible dropoffs in one vehicle, with a deterministic fare engine (base fare plus per-km charge minus pool discount) that reprices every rider whenever pool membership changes.
- Prevented seat overbooking under concurrent demand using SERIALIZABLE transactions, SELECT ... FOR UPDATE row locks, retry with backoff and a PostgreSQL trigger as a final backstop; proven by a test firing six parallel requests at a 3-seat vehicle.
- Modeled an independent per-rider ride lifecycle (requested, matched, arrived, started, completed or cancelled) with transition guards and a status-history audit trail; stored money as integer poysha to avoid floating-point errors.
- Secured the app with JWT in httpOnly cookies via a Next.js backend-for-frontend proxy, role-based ownership checks and Zod validation; shipped multi-stage Docker builds and a Jest/Supertest integration suite against a real PostgreSQL; deployed on Vercel, Render and Neon.

AI Career Agent: AI-Powered Career Automation Platform
React, TypeScript, Node.js, Express.js, MongoDB, OAuth 2.0, Jest, Generative AI
Live: ai-career-agent-1bn8.onrender.com | **Code:** github.com/HafijurRahmanBhuiyan/Ai-Career-Agent

- Built a full-stack platform that connects GitHub, Gmail, LinkedIn and three live job sources (Adzuna, Arbeitnow, RemoteOK) for AI project analysis, job matching, application tracking and server-side CV PDF generation.
- Engineered a 7-provider AI fallback chain (Claude, Gemini, OpenAI, Groq, OpenRouter, Cerebras, Mistral) with free-model pools, Zod-validated outputs and cached results to keep AI features available and control cost.
- Secured the app with JWT authentication, AES-256-GCM encrypted OAuth tokens, rate limiting and response compression; enforced human-in-the-loop approval for every external action.
- Wrote 990+ automated tests (Jest, Supertest, in-memory MongoDB) covering auth, ownership checks and validation; automated job ingestion with n8n and a GitHub Actions keep-alive workflow.

TradePilot AI: AI-Powered Trading Analysis & Paper Trading Platform
TypeScript, Node.js, Fastify, PostgreSQL, React, Gemini / OpenAI APIs, WebSocket, Docker, MetaTrader 5
Code: github.com/HafijurRahmanBhuiyan/TradePilot-AI

- Built a 9-workspace TypeScript monorepo that streams real-time Binance and MetaTrader 5 market data and generates trading signals through multi-timeframe confluence and strategy scoring.
- Implemented strategy and risk engines (RSI, EMA, MACD, ATR, VWAP, market structure) with automated position sizing and entry, stop-loss and take-profit calculation; validated signals through Gemini / OpenAI structured output.
- Developed a signal state machine, paper-trading engine, trade journal and performance analytics, plus backtesting and walk-forward validation to test strategies for overfitting.
- Built a React Chrome (MV3) side-panel extension that delivers live signals beside TradingView over WebSocket; ~237 automated tests and a Docker Compose stack (PostgreSQL, Redis).

FastAid: Emergency Medical Assistance Platform
PHP, MySQL, JavaScript / AJAX, Bootstrap
Live: fastaid.fwh.is | **Code:** github.com/HafijurRahmanBhuiyan/fast-aid

- Developed a three-role platform (patient, volunteer, admin) that connects patients with nearby admin-approved volunteers, with role-based access control and email notification on volunteer approval.
- Built an emergency request workflow (create, accept, complete) with AJAX status polling every 5 seconds; applied CSRF tokens, prepared SQL statements, bcrypt password hashing and HttpOnly session cookies; designed the MySQL schema.

Breeze Restaurant: Responsive Restaurant Website
React 19, TypeScript, Vite, Tailwind CSS, Google Maps
Live: breeze-restaurant.netlify.app | **Code:** github.com/HafijurRahmanBhuiyan/Breeze-Restaurant

- Built a bilingual (English/Bengali) single-page site with a filterable menu, keyboard-accessible gallery lightbox, reservation flow and Google Maps embed; deployed on Netlify.
- Added SEO and accessibility work: Open Graph and Twitter cards, schema.org structured data, semantic landmarks, ARIA labels and lazy-loaded images.

ACADEMIC & RESEARCH PROJECTS

- **Deep Learning Classification, Lipoma vs. WDLPS** (Python, CNN): classified soft-tissue tumors from medical imaging data with convolutional neural networks.
- **BTC Price Prediction** (Python, Machine Learning): modeled and forecast Bitcoin price trends with polynomial regression on historical data.

EDUCATION

B.Sc. in Computer Science & Engineering 2022 – 2026
Independent University, Bangladesh (IUB) | CGPA: 3.16 / 4.00

Higher Secondary Certificate (HSC), Science, Dhaka Imperial College | GPA: 3.92 / 5.00 2019

Secondary School Certificate (SSC), Science, Bholabo Shaheed Smrity High School | GPA: 5.00 / 5.00 2017
