PROFESSIONAL SUMMARY

Software Engineer and Full-Stack Developer (B.Sc. in Computer Science & Engineering, 2026) who builds and deploys end-to-end web applications with React, TypeScript, Node.js, Django and PostgreSQL. Delivered five production-style projects spanning AI-integrated platforms, a service marketplace with payment workflows, and secure role-based systems, alongside a project-based internship at FNF Planet. Strong in REST API design, authentication and authorization, relational and NoSQL database design, and cloud deployment. Collaborative, quick to learn, and effective at using AI tools to ship reliable software faster.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, TypeScript, C, PHP, HTML5, CSS3

Frontend: React.js, Next.js, Tailwind CSS, Bootstrap, Vite, Responsive Web Design

Backend & APIs: Node.js, Express.js, Django, Django REST Framework, FastAPI, Fastify, REST APIs, JWT, OAuth 2.0, WebSocket

Databases: PostgreSQL, MySQL, MongoDB, Supabase, Neon

Tools & DevOps: Git, GitHub, Docker, Render, Vercel, Netlify, VS Code

AI / ML: LLM API Integration (Claude, Gemini, OpenAI), Deep Learning (CNN), Polynomial Regression, Data Preprocessing

Professional Skills: Problem Solving, Critical Thinking, Teamwork, Effective Communication, AI-Assisted Development

Spoken Languages: English (Fluent), Bengali (Native)

WORK EXPERIENCE

Web Developer (Project-Based Internship)

FNF PLANET

- Developing Servico, a full-featured service marketplace platform inspired by Sheba.xyz, using React.js on the frontend and Django REST Framework on the backend.
- Building and integrating reusable frontend components with backend APIs to deliver features on schedule within a cross-functional team.
- Participating in code reviews, testing and deployment workflows to maintain code quality and release reliability.

EDUCATION

B.Sc. in Computer Science & Engineering

2022 - 2026

Independent University, Bangladesh (IUB) | CGPA: 3.16 / 4.00

Higher Secondary Certificate (HSC), Science

2019

Dhaka Imperial College | GPA: 3.92 / 5.00

Secondary School Certificate (SSC), Science

2017

Bholabo Shaheed Smrity High School | GPA: 5.00 / 5.00

PROJECTS

AI Career Agent: AI-Powered Career Automation Platform

React, TypeScript, Node.js, Express.js, MongoDB, OAuth 2.0, REST APIs, Generative AI

Live: ai-career-agent-1bn8.onrender.com | Code: github.com/HafijurRahmanBhuiyan/Ai-Career-Agent

- Built a full-stack platform that unifies GitHub, Gmail, LinkedIn and live job sources into one workflow for AI project analysis, job matching, application tracking and server-side CV/PDF generation.
- Engineered a multi-provider AI fallback chain (Claude, Gemini, OpenAI, Groq, OpenRouter, Cerebras, Mistral) to keep AI features available and reduce cost.
- Integrated GitHub, Gmail and LinkedIn OAuth/APIs with JWT authentication, secure token handling, job aggregation and automated career-email sync and classification.
- Improved performance and reliability with lazy loading, API compression, rate limiting and background sync; enforced human-in-the-loop approval for every external action.

Servico: Service Booking and Management System

React.js, Django REST Framework, PostgreSQL, Tailwind CSS, JWT

Live: servico-frontend-0f10.onrender.com | Code: github.com/HafijurRahmanBhuiyan/servico

- Developed a full-stack home-services marketplace connecting customers, service providers and administrators through role-based dashboards and responsive interfaces.
- Built RESTful APIs with JWT authentication for service browsing, appointment booking, booking management, reviews and promo codes.
- Integrated payment workflows (bKash, Nagad, bank transfer, cash) and in-app customer-provider messaging to streamline the booking experience.
- Designed PostgreSQL data models for users, services, bookings and payments; deployed frontend and API on Render.

TradePilot AI: AI-Powered Trading Analysis & Paper Trading Platform

TypeScript, Node.js, Fastify, PostgreSQL, React, Gemini / OpenAI APIs, WebSocket, Docker, MetaTrader 5

Code: github.com/HafijurRahmanBhuiyan/TradePilot-AI

- Developed a TypeScript monorepo platform that processes real-time Binance and MetaTrader 5 market data and generates trading signals through multi-timeframe analysis and strategy scoring.
- Built strategy and risk engines using RSI, EMA, MACD, ATR, VWAP and market structure, with automated position sizing and Entry/Stop-Loss/Take-Profit calculation.
- Integrated Gemini/OpenAI for structured signal validation; implemented a signal state machine, paper-trading engine, trade journal and performance analytics.
- Built a Chrome (MV3) side-panel extension in React that delivers live signals and AI analysis alongside TradingView via WebSocket alerts.

FastAid: Emergency Medical Assistance Platform

PHP, MySQL, JavaScript / AJAX, Bootstrap

Live: fastaid.fwh.is | Code: github.com/HafijurRahmanBhuiyan/fast-aid

- Developed a web platform connecting patients with nearby approved volunteers, with separate Patient, Volunteer and Admin workflows and role-based access control.
- Built an emergency request system with real-time AJAX status updates, plus volunteer registration, certificate verification, approval and service-completion tracking.
- Applied secure backend practices: PHP sessions, CSRF protection, password hashing, prepared SQL statements and input validation; designed the MySQL schema.

Breeze Restaurant: Responsive Restaurant Website

React 19, TypeScript, Vite, Tailwind CSS, Google Maps, Responsive Design

Live: breeze-restaurant.netlify.app | Code: github.com/HafijurRahmanBhuiyan/Breeze-Restaurant

- Designed and built a mobile-friendly, bilingual (English/Bengali) single-page site using reusable React components, deployed on Netlify.
- Implemented an interactive menu with category filtering and detail modals, a filterable gallery with fullscreen lightbox, and reservation/contact flows with Google Maps integration.
- Improved search visibility and social sharing with SEO metadata, Open Graph and Twitter cards, and structured Restaurant schema markup.

Academic & Research Projects

- **Deep Learning Classification, Lipoma vs. WDLPS** (Python, CNN): applied convolutional neural networks to classify soft-tissue tumors from medical imaging data to support clinical diagnosis.
- **BTC Price Prediction** (Python, Machine Learning): applied polynomial regression to historical Bitcoin price data to model and forecast price trends.
